

An Introduction to Myprogress

A digital portfolio designed for direct observation and clinical assessments in medical education.

Developed with medical schools around the world, Myprogress is a market-leading digital learning portfolio designed to enhance the entire learner experience with a built-in mobile app to support assessment in challenging clinical settings.

Our Key Features...

Quickly and easily deploy assessments

Create, manage and deploy customisable forms and assessments for students to receive directly into their digital workspace and begin working with straightaway.

Visualise student progress

Get real time reporting and track student progress through automatically mapping assessments and other forms of evidence to your frameworks and key competencies.

Reduce paperwork and save admin time

Going digital not only improves digital literacy across the school, but also reduces paperwork, printing costs and admin time, allowing staff to focus on delivering outstanding learning programmes.

Build engagement and enhance the student experience

Give and receive instant feedback on student performance, support practice reflection and encourage student educational effectiveness through ease of assessment whilst on practice.

Take advantage of best-practice

Use a range of grading schemes and assessment workflows designed for clinical settings such as mini-CEX, DOPS, Mini-PAT, TAB, MSF, peer-based learning, case logs, EPAs and more.

No WiFi? No problem

In clinical settings, going digital can be a challenge when WiFi access is unreliable - the Myprogress app is unique in that it works offline and syncs when WiFi is available.

“The platform allows students to get the support they need, and the staff to have the information they need to support the students. Staff can see how students are getting on, on an ongoing basis, and can intervene just in time if there are any issues.”

Luke Woodham

St George's University of London, UK.

Who We Work With...

We work with some of the world's leading medical schools...

Supporting You Every
Step of the Way...

Working with MyKnowledgeMap, Creators of Myprogress

We understand more than anyone the challenges around taking a paper process and going digital. With a strong user group and by working closely with our customers we can offer unparalleled support and industry experience to ease the transition.

With 20 years' experience working in medical education, Myprogress is tailored to support a wide range of learning and assessment workflows, helping you take advantage of the latest best-practices and supporting you in delivering outstanding learning programmes.

Get in touch

Join some of the world's leading medical schools in the world and get in touch with us to arrange a short demonstration.
